

---

Studs Unlimited is committed to the continued contribution of the recycling efforts to promote a better tomorrow for all of us. The raw materials we utilize are derived and processed from recycled steel. Our efforts in this contribution allow us to offer the finish product, to the end user, in pre-cut lengths of finish product which in turn accounts for a substantial decrease on jobsite waste. Below are the LEED credits for which Studs Unlimited can offer.

LEED Credit MR 2 - Studs Unlimited structural and non-structural manufactured members are manufactured from raw steel coils. Cold Form Steel is processed with Iron Ore as well as steel scrap with small amounts of carbon in a Basic Oxygen Furnace (BOF) or Electric Arc Furnace (EAF). Steel can be one hundred percent (100%) recycled. Specifics to MR 2 credit varies by project and contribution to this credit must be determined by the contractor. This credit is valued up to 2 points.

LEED Credit MR 4 - Steel Recycling Institute documented studies reflect cold-formed steel framing products with a minimum recycled content of 34.2%, of which 19.8% is post-consumer and 14.4% is pre-consumer. Recycled content of materials contributes to LEED Credits MR 4.1 and 4.2. Studs Unlimited is not the producer of raw material thus; Studs Unlimited does not hold the mill certificates. Mill Certificates from the raw materials producer are available and need to be requested through Studs Unlimited on a project specific basis. This credit is valued up to 2 points.

LEED Credit MR 5 - Studs Unlimited manufacturing facility is located in Oklahoma City, Oklahoma. According to LEED Credit MR 5, the destination of the finish product must be within a 500 mile radius of the manufacturing plant as well as the point of extraction of raw materials. The project location is the determination for this credit guideline. This credit is valued up to 2 points.

In summary, Studs Unlimited values the recycling efforts and will remain conscious in our efforts.
